

LEISTUNGSERKLÄRUNG

DoP: 0125

für fischer Highbond-Anker FHB (Verbundanker für die Verwendung in Beton) – DE

1. Eindeutiger Kenncode des Produkttyps: **DoP: 0125**
2. Verwendungszweck(e): **Nachträgliche Befestigung im gerissenen und ungerissenen Beton, siehe Anhang, insbesondere Anhänge B 1 bis B 4**
3. Hersteller: **fischerwerke GmbH & Co. KG, Klaus-Fischer-Straße 1, 72178 Waldachtal, Deutschland**
4. Bevollmächtigter: --
5. System(e) zur Bewertung und Überprüfung der Leistungsbeständigkeit: **1**
6. Europäisches Bewertungsdokument: **ETAG 001; 2013-04**
Europäische Technische Bewertung: **ETA-06/0171; 2017-05-26**
Technische Bewertungsstelle: **DIBt**
Notifizierte Stelle(n): **1343 – MPA Darmstadt**
7. Erklärte Leistung(en):

Mechanische Festigkeit und Standsicherheit (BWR 1), Sicherheit bei der Nutzung (BWR 4)

- **Charakteristischer Widerstand: Siehe Anhang, insbesondere Anhänge C 1 bis C 3**
- **Verschiebungen unter Zug- und Querbeanspruchung: Siehe Anhang, insbesondere Anhang C 3**

Brandschutz (BWR 2)

- **Brandverhalten: Der Dübel erfüllt die Anforderungen der Klasse A 1**
- **Feuerwiderstand: KLF**

8. Angemessene Technische Dokumentation und/oder Spezifische Technische Dokumentation: ---

Die Leistung des vorstehenden Produkts entspricht der erklärten Leistung/den erklärten Leistungen. Für die Erstellung der Leistungserklärung im Einklang mit der Verordnung (EU) Nr. 305/2011 ist allein der obengenannte Hersteller verantwortlich.

Unterzeichnet für den Hersteller und im Namen des Herstellers von:

Andreas Bucher, Dipl.-Ing.

Wolfgang Hengesbach, Dipl.-Ing., Dipl.-Wirtsch.-Ing.

i.V. A. Bucher

i.V. W. Hengesbach

Tumlingen, 2017-06-02

- Diese Leistungserklärung wurde in verschiedenen Sprachversionen erstellt. Für den Fall unterschiedlicher Auslegung hat immer die englische Version Vorrang.
- Der Anhang enthält freiwillige und ergänzende Informationen in englischer Sprache. Diese gehen über die (sprachneutral angegebenen) gesetzlichen Anforderungen hinaus.

Specific Part

1 Technical description of the product

The fischer Highbond-anchor FHB is a torque controlled bonded anchor consisting of a mortar cartridge with FIS HB and an anchor rod with hexagon nut and washer. The anchor rod (including nut and washer) is made of galvanised steel.

The load transfer is realised by mechanical interlock of several cones in the bonding mortar and then via a combination of bonding and friction forces in the anchorage ground (concrete).

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance	See Annex C 1 to C 3
Displacements under tension and shear loads	See Annex C 3

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorage satisfy requirements for Class A1
Resistance to fire	No performance assessed

3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply.

3.4 Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with guideline for European technical approval ETAG 001, April 2013, used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011, the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Installation conditions

Pre-positioned anchor

Installation conditions with additional mounted filling disc

Pre-positioned or push through anchor

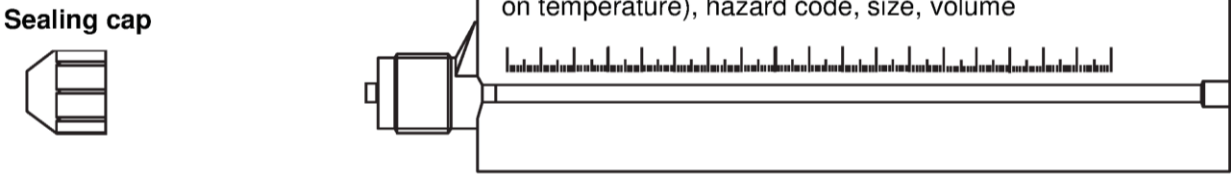

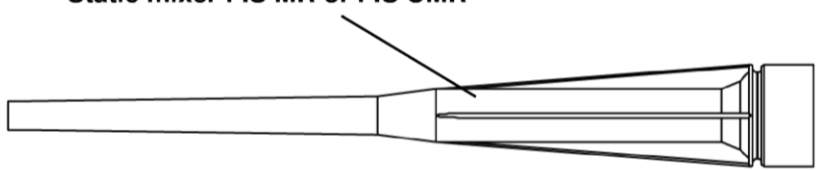

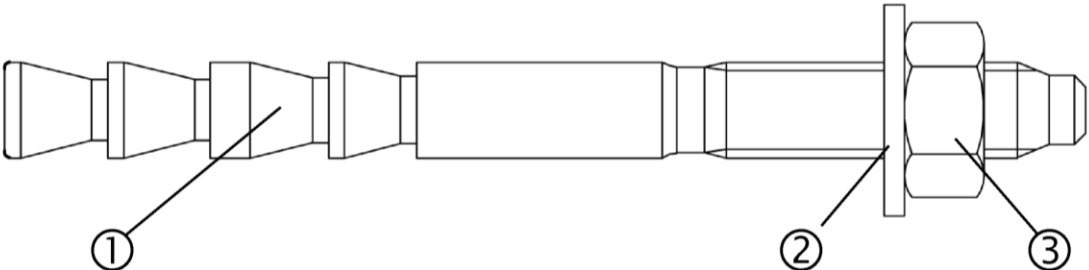

t_{fix} Thickness of the fixture
 h_{ef} Effective anchorage depth

Annex B 2

Table B3: Maximum processing time of the mortar and minimum curing time

System temperature ¹⁾ [°C]	Maximum processing time $t_{work}^{2)}$	Minimum curing time $t_{cure}^{3)}$
-5 to -1	--	6 h
0 to +4	--	3 h
+5 to +9	15 min	90 min
+10 to +19	6 min	35 min
+20 to +29	4 min	20 min
+30 to +39	2 min	12 min

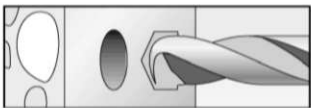

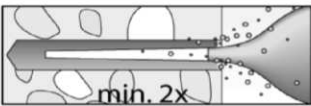

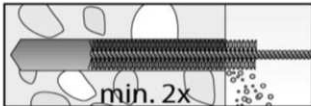

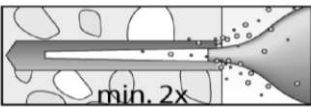

¹⁾ During the curing of the mortar the temperature of the concrete may not fall below -5°C

²⁾ The temperature of the mortar may not fall below +5°C

³⁾ In wet concrete or flooded holes the curing times must be doubled

Installation instructions (Part 1)

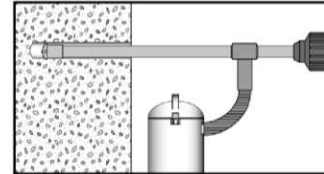

Drilling and cleaning the hole (hammer drilling with standard drill bit)

1		Drill the hole with hammer drill. Drill hole diameter d_0 and drill hole depth h_0 see Table B2
2		Blow out the drill hole twice by hand
3		Brush the hole twice. Corresponding steel brushes see Table B2
4		Blow out the drill hole twice by hand

Go to step 5

Drilling and cleaning the hole (hammer drilling with hollow drill bit)

1		Check a suitable hollow drill (see Table B1) for correct operation of the dust extraction
2		Use a suitable dust extraction system, e. g. Bosch GAS 35 M AFC or a comparable dust extraction system with equivalent performance data Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. Diameter of drill hole d_0 and drill hole depth h_0 see Table B2

Go to step 5

fischer Highbond- Anchor FHB	Annex B 3
Intended use Processing times and curing times Installation instructions part 1	

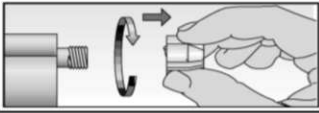

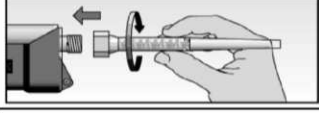

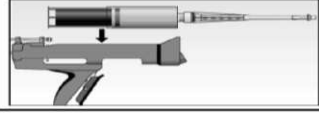

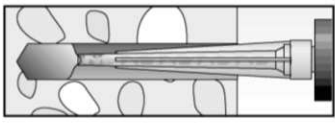

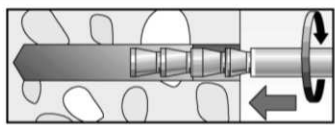

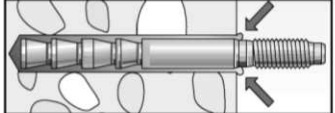

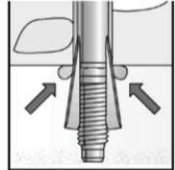

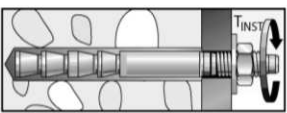

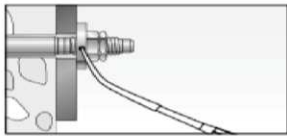

Installation instructions part 2	
Preparing the cartridge	
5	 <p>Remove the sealing cap</p>
6	 <p>Screw on the static mixer (the spiral in the static mixer must be clearly visible)</p>
7	 <p>Place the cartridge into the dispenser</p>
8	 <p>Extrude approximately 10 cm of material until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey</p>
Go to step 9	
Injection the mortar; Installation Highbond-Anchor rod FHB-A	
9	 <p>Adhere to the maximum processing time (t_{work}) of the mortar (see Table B3). Fill approximately 2/3 of the drill hole with mortar. Exact quantity of mortar (travel scale on the cartridge) see instruction sheet. Fill the drill hole with mortar, always begin from the bottom of the hole to avoid bubbles</p>
	 <p>Only use clean and oil-free Highbond- Anchor rod FHB-A. Push the anchor rod down to the bottom of the hole, turning it slightly while doing so</p>
10	 <p>After inserting the anchor rod, excess mortar must be emerged around the anchor rod</p>
	 <p>For overhead installations support the anchor rod with wedges. (e.g. fischer centering wedges)</p> 
11	 <p>Wait for the specified curing time t_{cure} see Table B3</p>
12	 <p>Screw on the fixture and for installation check generate the correct torque moment ($T_{inst,max}$ see Table B2)</p>
Option	 <p>After the minimum curing time is reached, the gap between anchor and fixture and the fischer filling disc may be filled with mortar (for eliminating the gap); compressive strength $\geq 50 \text{ N/mm}^2$ (e.g. FIS HB)</p>
